

Rani Medspa: Meta Ads Creative Strategy & Audience Playbook (2025–2026)

Prepared by: Manus AI
Budget: \$3,000/month
Market: Seattle, WA
Platforms: Facebook + Instagram

Executive Summary

This playbook provides Rani Medspa with a complete, actionable Meta advertising strategy for 2025–2026. It is built around a \$3,000/month budget and covers every dimension of a high-performing paid social program: budget allocation by campaign objective, treatment-specific audience definitions, lookalike and retargeting architecture, creative briefs for each ad format, landing page conversion requirements, Seattle market benchmarks, a competitor intelligence report from the Meta Ad Library, a month-by-month seasonal campaign calendar, and a video content strategy for Reels.

The core strategic principle is **treatment-specificity over brand genericism**. Generic “Visit Our MedSpa” campaigns consistently underperform compared to campaigns built around individual treatments with tailored audiences, creative, and offers. Splitting a single medspa campaign into treatment-specific campaigns typically drops the average cost per lead (CPL) by 40–60% [1](#).

1. Budget Allocation: \$3,000/Month

Strategic Framework

The \$3,000 monthly budget is divided across three campaign objectives that correspond to the three stages of the patient acquisition funnel. **Prospecting** (cold audiences) receives the largest share because building a consistent pipeline of new patients is the primary growth lever. **Retargeting** (warm audiences) receives a meaningful allocation because it is the most efficient spend — these users have already expressed interest. **Retention and upsell** receives a smaller but critical allocation to maximize the lifetime value of existing patients.

Campaign Objective	Funnel Stage	Monthly Budget	% of Total
Prospecting (Cold Audiences)	Top of Funnel	\$1,800	60%
Retargeting (Warm Audiences)	Middle/Bottom of Funnel	\$900	30%
Retention & Upsell (Existing Patients)	Post-Purchase	\$300	10%
Total		\$3,000	100%

Prospecting Budget: \$1,800 — Allocation by Treatment

Within the \$1,800 prospecting budget, allocate by treatment based on margin, demand, and seasonal timing. The following represents a baseline allocation for a standard month. Adjust seasonally per the calendar in Section 7.

Treatment Campaign	Monthly Budget	Rationale
Injectables (Botox + Fillers)	\$750	Highest demand, lowest CPL, gateway treatment for new patients
Laser Hair Removal	\$450	Strong seasonal demand (Feb–Jun); high package value
Skin Rejuvenation (Microneedling, Peels, HydraFacial)	\$350	Broad appeal, year-round demand, strong upsell to injectables
Body Contouring (CoolSculpting, Emsculpt)	\$250	Higher CPL but highest revenue per patient
Prospecting Total	\$1,800	

Retargeting Budget: \$900 — Allocation by Audience Segment

Retargeting Audience	Monthly Budget	Format
Website visitors (all pages, 30–60 days)	\$300	Testimonial video, FAQ carousel
Instagram + Facebook engagers (90 days)	\$250	Social proof video, limited-time offer
Video viewers (50%+ completion, 60 days)	\$200	Consultation offer, pricing transparency ad
Email list non-converters	\$150	Exclusive offer, membership pitch
Retargeting Total	\$900	

Retention Budget: \$300 — Allocation by Objective

Retention Campaign	Monthly Budget	Format
Membership promotion (existing patients)	\$150	Carousel, single image with offer
Seasonal upsell (cross-sell new treatments)	\$100	Short video, “Have you tried...?”
Referral program promotion	\$50	Simple image with referral offer
Retention Total	\$300	

2. Audience Targeting: Definitions by Service Line

Core Seattle Demographics

All campaigns should be anchored to the following baseline demographic parameters, adjusted per treatment as noted below.

- **Location:** Seattle, WA + 10–15 mile radius (include Bellevue, Kirkland, Redmond, Mercer Island for higher-income targeting)
- **Primary Gender:** Women (80–90% of budget); maintain separate male-targeted ad sets for Botox, Body Contouring, and Hair Restoration
- **Household Income:** Top 25–30% (use Meta’s income-based targeting or target high-income zip codes: 98004, 98005, 98006, 98033, 98040, 98112)
- **Device:** Prioritize mobile placements (70%+ of medspa ad engagement occurs on mobile)

Treatment-Specific Audience Definitions

Injectables (Botox, Dysport, Dermal Fillers)

- Age: Women 28–58

- Interests: Skincare, anti-aging, beauty salons, cosmetics, luxury lifestyle, specific brands (Allergan, Juvederm, Restylane, RealSelf)
- Behaviors: Engaged shoppers, frequent travelers, beauty & spa purchasers
- Exclude: Existing patients (upload customer list as exclusion)

Laser Hair Removal

- Age: Women 22–45; separate ad set for Men 25–40
- Interests: Fitness, travel, swimwear, personal grooming, waxing, yoga, running
- Behaviors: Engaged shoppers, summer/travel purchasers
- Seasonal Note: Ramp up spend February through June; reduce July–September

Body Contouring (CoolSculpting, Emsculpt NEO)

- Age: Men and Women 30–55
- Interests: Fitness, weight loss, healthy eating, gym memberships, high-end activewear (Lululemon, Athleta), biohacking, wellness
- Behaviors: Gym members, health & wellness purchasers, higher income bracket
- Note: These patients are research-heavy. Use lead magnet funnels (free consultation with body mapping) rather than direct booking CTAs [1](#)

Skin Rejuvenation (Microneedling, Chemical Peels, HydraFacial)

- Age: Women 25–50
- Interests: Skincare routines, dermatology, organic beauty, wellness, self-care, specific brands (SkinCeuticals, Obagi, Drunk Elephant, The Ordinary)
- Behaviors: Beauty & spa purchasers, skincare routine followers

IV Therapy & Wellness

- Age: Men and Women 25–50
- Interests: Wellness, biohacking, fitness, marathon/triathlon, hangover recovery, nutrition, functional medicine
- Behaviors: Health & wellness purchasers, gym members, outdoor enthusiasts

3. Lookalike Audience Strategy

Lookalike audiences (LLAs) allow Meta’s algorithm to find new users who share the behavioral and demographic characteristics of your best existing patients. The source audience quality is the single most important factor in LLA performance.

Recommended Source Audiences (Ranked by Priority)

Tier 1 — Highest Value Sources

1. **High-LTV Patient List (1% LLA):** Upload a CSV of patients who have spent \$2,000+ or visited 3+ times in the past 12 months. This is the most powerful source audience because it reflects your ideal, loyal patient. Build a 1% LLA for prospecting and a 2–3% LLA for broader reach.
2. **Membership Holders (1% LLA):** Patients enrolled in a recurring membership program represent the highest lifetime value and strongest brand affinity. A 1% LLA from this list will find users most likely to commit to ongoing treatments.
3. **Recent Purchasers — Last 90 Days (1–2% LLA):** Upload patients who have booked and completed a treatment in the last 90 days. This recency ensures the algorithm uses fresh behavioral signals.

Tier 2 — Supplementary Sources

1. **Website Visitors — Purchase/Booking Page (1% LLA):** Create a custom audience of users who visited the booking confirmation page (indicating a completed booking), then build a 1% LLA from this group.
2. **Video Viewers — 75%+ Completion (1–2% LLA):** Users who watched most of a treatment video have demonstrated high intent. This is an excellent source for finding similar high-intent cold audiences.
3. **Instagram Engagers — Last 90 Days (1–3% LLA):** Useful for building brand awareness campaigns when the above lists are too small (minimum 100 users required for LLA creation; 1,000+ recommended).

Treatment-Specific LLA Architecture

Rather than building one generic “medspa patient” LLA, create separate lookalike audiences for each major treatment category. A Botox patient and a body contouring patient have different demographics, income levels, and motivations. Separate LLAs allow the algorithm to find the right person for each specific campaign [1](#).

4. Retargeting Strategy

Retargeting is the highest-efficiency spend in the Meta ads ecosystem. By targeting users who have already interacted with Rani Medspa, the cost per acquisition drops significantly compared to cold prospecting — in some cases by up to 60% [2](#).

Retargeting Audience Layers (Prioritized)

Layer 1 — Hottest Intent (Highest Priority)

- Website visitors who viewed a specific treatment page but did not book (last 30 days)
- Users who clicked a “Book Now” or “Learn More” CTA but did not complete the booking form (last 14 days)
- *Ad Strategy:* Show a direct offer ad with a clear price point and a single CTA. Address the most common objection for that specific treatment (e.g., “Wondering if Botox will look natural? Here’s what 20 units actually looks like.”).

Layer 2 — Warm Engagement

- Website visitors (all pages, last 60 days)
- Instagram profile visitors (last 30 days)
- Users who engaged with a Facebook or Instagram post (liked, commented, saved, shared — last 90 days)
- *Ad Strategy:* Show testimonial videos and social proof. Reinforce trust and introduce a limited-time offer to create urgency.

Layer 3 — Video Viewers

- Users who watched 50%+ of any video ad (last 60 days)
- *Ad Strategy:* Show a consultation offer or a “next step” ad. These users are educated about the treatment; the goal is to move them to book.

Layer 4 — Email List Segments

- Upload email list of leads who have not yet booked (non-purchaser suppression list)
- Upload email list of lapsed patients (no visit in 6+ months)
- *Ad Strategy:* For non-bookers, offer an exclusive first-visit incentive. For lapsed patients, use a “We miss you” re-engagement offer or promote a new treatment they haven’t tried.

Retargeting Creative Principles

- Never show the same ad to a retargeting audience that you showed them in prospecting. The user has already seen it; show them something new that moves them further down the funnel.
- Use frequency caps (2–3 impressions per week per user) to avoid ad fatigue.
- Exclude users who have booked in the last 30 days from all retargeting campaigns.

5. Ad Formats & Creative Strategy (2025–2026)

The most effective medspa ad creative in 2025–2026 is characterized by authenticity, education, and clear outcome-driven messaging. Generic stock imagery of women in robes consistently underperforms compared to real patient content and provider-led educational videos ³.

Top-Performing Ad Formats (Ranked by CPL Efficiency)

Format	CPL Impact	Best Use Case	Platform Placement
Short-Form Video (15–30s Reel)	Lowest CPL	Treatment education, provider intros, UGC	Reels, Stories, Feed
UGC Video (Patient-Generated)	Very Low CPL	Trust-building, social proof, journey content	Reels, Stories, Feed
Carousel (3–5 images/videos)	Low–Medium CPL	Multiple treatment areas, step-by-step process, package options	Feed
Single Image with Offer Overlay	Medium CPL	Time-sensitive promotions, seasonal specials	Feed, Stories
Lead Form Ad (Meta Instant Form)	Lowest CPL (but lower quality)	High-volume lead gen for Botox, facials, consultations	Feed

Short-form vertical video (9:16 ratio) performs 20–30% better on CPL in Stories and Reels placements compared to square or horizontal feed formats ¹. Always create vertical versions of all video content.

Creative Brief Library

The following briefs are ready-to-execute creative directions for each major treatment and funnel stage.

Creative Brief 1: “The Provider Walkthrough” — Injectables (Prospecting)

- **Objective:** Awareness + Lead Generation
 - **Format:** Instagram Reel (9:16 vertical video, 20–25 seconds)
 - **Hook (0–3s):** Provider holds a syringe, looks directly at camera: *“Here’s exactly what 20 units of Botox looks like — and where I put it.”*
 - **Body (3–18s):** Quick cuts showing the provider marking the face, explaining the treatment areas in plain language. Emphasize comfort, natural results, and the 10-minute appointment time.
 - **CTA (18–25s):** *“Book your first-time consultation at Rani Medspa in Seattle. Tap the link below.”*
 - **Text Overlay:** “First-Time Patient Special: \$11/Unit Botox”
 - **Audience:** Women 28–55, Seattle, skincare/anti-aging interests
 - **Landing Page:** Dedicated Botox landing page with pricing, provider bio, and before/after photos
-

Creative Brief 2: “The UGC Journey” — Laser Hair Removal (Prospecting)

- **Objective:** Lead Generation
- **Format:** UGC-style video (filmed on iPhone, 20–30 seconds)
- **Hook (0–3s):** Patient in casual setting: *“I finally stopped shaving my legs and tried laser hair removal at Rani Medspa.”*
- **Body (3–20s):** Patient shows the clinic, a brief clip of the treatment (emphasizing it’s quick and comfortable), and talks about how many sessions they’ve had and the results.
- **CTA (20–30s):** *“If you’re in Seattle, their summer prep package is so worth it. Link in bio.”*

- **Audience:** Women 22–45, Seattle, fitness/travel/grooming interests
 - **Seasonal Timing:** February through June
-

Creative Brief 3: “The Before & After Story” — Microneedling/Skin Rejuvenation (Prospecting)

- **Objective:** Awareness + Consideration
 - **Format:** Carousel (5 slides) or short video
 - **Slide 1/Hook:** “This is what 3 sessions of microneedling at Rani Medspa did for [Patient Name]’s skin.”
 - **Slides 2–4:** Natural, well-lit before-and-after photos with context (e.g., “3 sessions, 6 weeks apart, no filter”). Include a brief quote from the patient.
 - **Slide 5/CTA:** “Ready for your skin reset? Book a free consultation — link below.”
 - **Note:** Use patient-approved photos with signed consent. Avoid overly dramatic transformations that could trigger Meta’s ad review policies.
-

Creative Brief 4: “The FAQ Buster” — Body Contouring (Retargeting)

- **Objective:** Consideration + Conversion (Retargeting warm audiences)
 - **Format:** Short video (30–45 seconds), provider-led
 - **Hook (0–3s):** Provider: “*The #1 question I get about CoolSculpting: ‘Does it actually work?’*”
 - **Body (3–35s):** Provider answers the top 3 objections: Does it work? Is it painful? How many sessions? Show brief patient results.
 - **CTA (35–45s):** “*Come in for a free body mapping consultation. We’ll show you exactly what’s possible for your body.*”
 - **Audience:** Retargeting — website visitors to body contouring page, video viewers 50%+
-

Creative Brief 5: “The Membership Pitch” — Retention (Existing Patients)

- **Objective:** Retention + Upsell
 - **Format:** Single image or short video
 - **Headline:** “Save \$X Every Month as a Rani Medspa Member”
 - **Body Copy:** “Our members get monthly Botox units, priority booking, and exclusive discounts on all treatments. Starting at \$[price]/month.”
 - **CTA:** “Join the Membership — Learn More”
 - **Audience:** Existing patient email list, past purchasers (last 12 months)
-

Video Ad Strategy for Reels

Instagram Reels is the highest-priority placement for medspa video ads in 2025–2026. Short-form videos generate 2–3x higher engagement than static images in the beauty and wellness category ³.

Content Types That Perform Best for Medspa Reels:

1. **“Day in the Life” Treatment Clips (10–20 seconds):** Quick, satisfying clips of a treatment being performed (e.g., a HydraFacial extraction, a lip filler injection, a laser pass). These are highly shareable and drive organic reach.
2. **Patient Reaction Videos:** Capturing a patient’s genuine reaction when they see their results for the first time. Emotional authenticity drives engagement and shares.
3. **Educational “Myth Busting” Videos:** “Does Botox make you look frozen? Let me show you what natural Botox actually looks like.” These build trust and address objections simultaneously.
4. **“Get Ready With Me” Treatment Prep:** A patient showing up to their appointment, going through the process, and leaving glowing. Normalizes the experience for first-timers.

5. **Provider Personality Content:** The injector or esthetician sharing their philosophy, answering common questions, or showing a day in the clinic. Builds the personal brand that drives patient loyalty.

Reels Production Guidelines:

- Film in vertical (9:16) format
 - Always include captions (85% of Reels are watched without sound)
 - Hook must land in the first 1–2 seconds
 - Keep under 30 seconds for best completion rates
 - Use trending audio when appropriate (increases organic distribution)
 - Branding should be subtle — feel native, not like an ad
-

6. Landing Page Best Practices for Medspa Ads

A high-converting landing page is the difference between a 15*lead* and a 150 lead. The most common failure mode is driving paid traffic to a generic homepage or a treatment page that was designed for SEO, not conversion [4](#).

The 9 Elements of a High-Converting Medspa Landing Page [4](#)

1. **A headline that mirrors the patient's desire, not the treatment name.** Example: "Smooth Away Fine Lines and Look Refreshed — Without Anyone Knowing" rather than "Botox Treatments in Seattle."
2. **A subheadline that confirms they're in the right place.** Example: "Rani Medspa — Seattle's trusted injectors for natural, beautiful results."
3. **A short value proposition explaining what results to expect.** Two to three sentences maximum. Focus on outcomes, not features.
4. **Real social proof that feels genuine.** Video testimonials from real patients are the gold standard. Google review widgets and star ratings also convert well.
5. **Before-and-after photos with honest context.** Include the number of units, sessions, or syringes used. Patients trust specificity.
6. **A "What to Expect" section.** Walk through the appointment step by step. This reduces anxiety and pre-qualifies patients, leading to higher show rates.
7. **Transparent pricing or a price range.** Hidden pricing is the single biggest cause of bounce on medspa landing pages. Display starting prices or promotional offers clearly.
8. **A soft, personal call-to-action.** "Book a Free 15-Minute Consultation" outperforms "Book Now" for high-consideration treatments. Multiple CTA buttons throughout the page (not just at the bottom) are essential.
9. **A friendly FAQ section.** Address the final objections: "Is it painful?", "How long does it last?", "What is the downtime?" Answering these on the page reduces phone call volume and increases online bookings.

Elements to Avoid

- Walls of medical jargon or ingredient lists
- Stock photos of models who don't represent real patients
- Navigation menus that lead visitors away from the page
- A single CTA button buried at the bottom

Lead Form vs. Landing Page Decision Framework

Use Meta Lead Forms When...	Use Landing Pages When...
Promoting Botox, facials, or simple consultations	Promoting body contouring, PRP, or high-ticket packages
Your team can call/text leads within 5 minutes	You want to pre-qualify leads before they call
Maximizing lead volume is the primary goal	Lead quality matters more than lead volume
CPL is the primary optimization metric	You have a strong nurture sequence (email/SMS)

Lead form CPL is typically 30–50% lower than landing page CPL, but the leads are less qualified. A split approach — lead forms for Botox and facials, landing pages for body contouring and premium packages — is recommended [1](#).

7. Seasonal Campaign Calendar (2026)

Medspa demand follows predictable seasonal cycles. Allocating 60–70% of annual budget to January through June, when demand peaks, and maintaining baseline campaigns year-round while shifting treatment focus with the seasons, maximizes efficiency [1](#) [5](#).

Month	Campaign Theme	Priority Treatments	Key Offers & Creative Direction	Budget Guidance
January	“New Year, New You”	Body Contouring, IV Wellness, Facial Rejuvenation	Transformation packages, membership sign-up specials. Testimonial-driven video.	Increase to \$3,500+ if possible
February	“Self-Love & Valentine’s”	Lip Fillers, Botox, Couples Facials	“Glow up for yourself” messaging. Gift card promotions. Romantic-themed visuals.	Standard \$3,000
March	“Spring Prep”	Laser Hair Removal, Chemical Peels	“Last call” for heavy peels before sun exposure. Start summer prep messaging for laser.	Standard \$3,000
April	“Spring Slim-Down”	Body Contouring, Cellulite Reduction	“Beach Ready” body packages. Before-and-after campaigns.	Standard \$3,000
May	“Summer Ready”	Botox, Laser Hair Removal, HydraFacials	Peak demand for injectables before wedding/event season. Shift to summer-safe facials.	Increase to \$3,500+
June	“Summer Simplicity”	Injectables, Quick Facials	Minimal downtime treatments. “No-makeup glow” messaging. Vacation prep packages.	Standard \$3,000
July	“Summer Maintenance”	Hydration Facials, SPF Retail	Mid-summer refresh. Skincare product bundles. Client Q&A content on Stories.	Reduce to \$2,500
August	“Post-Summer Recovery”	Skin Restoration, Antioxidant Facials	Target sun damage. Email drip campaigns for late-summer skin repair.	Reduce to \$2,500
September	“Fall Refresh”	IPL, Microneedling, Peels	“Back to Laser Season.” Why fall is the best time for skin treatments.	Standard \$3,000
October	“Peak Laser Season”	Laser Hair Removal, Fractional Lasers	Bundled laser packages. Educational content on fall laser treatments.	Increase to \$3,500+
November	“Holiday Prep & Black Friday”	Botox, Fillers, Quick Peels	Black Friday package deals. “Holiday party ready” messaging. Social media countdowns.	Increase to \$3,500+
December	“Holiday Gifting & Glam”	Injectables, Gift Cards	“12 Days of Beauty” promotions. Gift card bonus campaigns. Year-end membership offers.	Standard \$3,000

8. Competitor Intelligence Report (Meta Ad Library Analysis)

The following analysis is based on a direct review of the Meta Ad Library for Seattle-area medspa competitors conducted in March 2026.

Competitor 1: Element MedSpa (Seattle, WA)

Active Ads: 4 active campaigns (as of March 2026)

Strategy: Element MedSpa is the most active Meta advertiser among Seattle competitors reviewed. Their strategy is heavily centered on short-form educational video (Reels), running exclusively on Instagram. They explain the science behind treatments in accessible language (e.g., “Salmon DNA injections...deliver DNA-repairing polynucleotides directly into the dermis”) and consistently state clear pricing in the ad copy itself (e.g., “450/*session*” *formicroneedling*, “650 for Half Syringe Lips + 20 Units Tox”). They use a “Send Message” CTA on Instagram, routing leads directly to DMs.

Creative Style: Conversational, science-forward, transparent on pricing, before-and-after video for lip fillers.

Opportunity for Rani: Element focuses heavily on Instagram only. Rani can gain an advantage by running on both Facebook and Instagram, targeting an older demographic (35–55) on Facebook that Element may be missing.

Competitor 2: Sheer Complexions, LLC

Active Ads: 1 active campaign (as of March 2026)

Strategy: Running a monthly specials promotion on Facebook. The ad is a static graphic listing multiple offers: “Tox Lock-In for 179, Glow – Up Package for 299, Buy More Get More Gift Card Event.” The approach is discount-heavy and promotion-focused.

Creative Style: Graphic-heavy, text-forward, discount-oriented.

Opportunity for Rani: Sheer Complexions is competing on price. Rani can differentiate by competing on experience, trust, and results rather than discounts, which attracts higher-LTV patients.

Competitor 3: Complexions Rx

Active Ads: 1 active campaign (low impressions, as of March 2026)

Strategy: Running a high-value lead generation offer for a specific concern (Hair Restoration): “Free Hair Loss Assessment + 600 Off Treatment.” *Uses a clear before – and –*

after image of hair density improvement. The offer is structured as a voucher with artificial scarcity (“50 vouchers available”). *

**Creative Style : ** Problem – solution framing, strong offer with clear value, urgency mechanics. **

**Opportunity for Rani : ** This voucher / lead magnet approach is effective for high –*

ticket treatments. Rani could adapt this strategy for body contouring (e.g., “Free Body Mapping Consultation + 200 Off Your First Session”).

Competitor 4: SkinSpirit (National Chain with Seattle Locations)

Strategy (Based on General Research): SkinSpirit runs polished, brand-forward campaigns emphasizing their clinical expertise and national reputation. They tend to use high-production-value imagery and focus on brand trust rather than direct-response offers.

Opportunity for Rani: As a local, independent medspa, Rani can out-compete SkinSpirit on the “personal relationship” and “community” dimensions. UGC content and provider personality videos will feel more authentic than a national chain’s polished brand ads.

Competitor 5: General Seattle Medspa Market

Most smaller Seattle medspas are not running active Meta ads, or are running very low-impression campaigns. This represents a significant opportunity. The Seattle medspa market is relatively under-advertised on Meta compared to markets like Los Angeles, Miami, or New York, meaning CPMs and CPLs should be at or below national averages.

Competitive Gaps & Rani’s Differentiation Opportunities

Competitor Weakness	Rani’s Opportunity
Element MedSpa: Instagram-only, no Facebook	Run multi-platform campaigns; capture older demographic on Facebook
Sheer Complexions: Discount-heavy, low brand equity	Compete on results, experience, and trust — not price
Most competitors: No retargeting infrastructure	Build a full retargeting funnel; capture warm leads competitors are leaving behind
Most competitors: No video testimonials	Invest in authentic UGC and patient testimonial video content
Most competitors: Generic landing pages	Build treatment-specific landing pages for each major service

9. Meta Ads Benchmarks: Seattle Medspa Market (2025–2026)

The following benchmarks are drawn from industry data for the beauty, cosmetics, and healthcare sectors on Meta, adjusted for the Seattle market’s competitive landscape ⁶.

Metric	Industry Average	Target for Rani	Notes
CPM (Cost per 1,000 Impressions)	12–18	14–20	Seattle is a competitive market; expect slightly elevated CPMs
CPC (Cost per Click)	0.77–1.32	1.00–2.50	Higher for high-intent treatment-specific audiences
CTR (Click-Through Rate)	1.58%	2.0%–3.5%	Strong video/Reels content and compelling offers push CTR above average
CPL (Cost per Lead)	21–43	15–45	Varies by treatment; Botox/Facials (15–30); Body Contouring (35–70)
CPA (Cost per Acquisition — Booked Patient)	50–120	60–150	Cost to acquire a booked and seated patient
Conversion Rate (Lead to Booked)	5.93%	8%–15%	Achievable with fast follow-up (under 5 minutes) and strong nurture sequence
ROAS (Return on Ad Spend)	1.8x–3.3x	3x–5x	Target minimum 3:1 ROAS; injectables with high LTV justify higher initial acquisition costs

At \$3,000/month, Rani should expect to generate approximately 80–150 leads per month across all treatment campaigns, assuming well-structured campaigns with proper tracking and dedicated landing pages. If lead volume falls below this range, the campaign structure — not the platform — is the most likely issue ¹.

10. Key Performance Indicators (KPIs) & Measurement Framework

To manage the \$3,000/month budget effectively, track the following KPIs weekly and optimize accordingly.

KPI	Target	Action if Below Target
Cost Per Lead (CPL)	< \$35 average	Test new creative hooks; review audience targeting
Lead-to-Consultation Rate	> 30%	Improve follow-up speed; review lead form questions
Consultation-to-Booking Rate	> 50%	Review consultation process; improve offer clarity
Cost Per Booked Patient	< \$100	Optimize full funnel, not just ad creative
ROAS	> 3:1	Shift budget to highest-performing treatment campaigns
CTR	> 2%	Test new creative; refresh ad copy
Ad Frequency	< 3.5 per week	Rotate creative; expand audience size

11. Implementation Roadmap

Month 1: Foundation

- Set up Meta Business Manager, Pixel, and Conversions API
- Create Custom Audiences (website visitors, email list, video viewers)
- Launch 2 treatment-specific prospecting campaigns (Botox + one other)
- Launch basic retargeting campaign for website visitors
- Build dedicated landing pages for each active treatment campaign

Month 2: Optimization

- Analyze Month 1 data; identify winning creative and audiences
- Scale winning ad sets by 20% budget increase
- Pause underperforming ad sets (CPL > 2x target)
- Launch 2 additional treatment campaigns
- Build Lookalike Audiences from first-month data

Month 3: Expansion

- Full campaign structure live across all treatment categories
- A/B test landing page variations
- Launch membership/retention campaign to existing patient list
- Begin seasonal campaign adjustments per the calendar in Section 7
